### 1 Introduction

The Avionics Reference Document (ARD) is a high level document describing what the onboard avionics system will do. The onboard avionics system is referred to as The Helix System. It consists of multiple circuit boards called Extention Boards which can read data from sensors through the rocket or interact with actuators throughout the rocket. These Extention boards are all connected together in a ring topology which allows new Extention Boards to be added or removed from the system without impacting performace of the rest of the system. These Extention Boards all connect with a central board called the Onboard Computer (OBC) which collects data, makes decisions based on data, communicates with ground support systems, and records data.

#### 1.1 Purpose

The purpose of this document is to outline for non avionics members a unified reference for how the onbaord computer will behave and why. Primary focus will be given to the different states that the rocket can be in (ie dry systems, leak check), what actions will be performed in each state, and what causes the transition between different states. This will be documented through extensive use of state machine diagrams.

Old version:

The purpose of this document is to act as a reference for how the OBC will behave. This includes:

- 1. How the system will react to failures such as disconnected sensors and over-pressurization events.
- 2. The states the rocket can be in including dry systems, leak check, launch, or even a failure state.
- 3. The ranges and accuracy of sensors in the system.
- 4. The rate at which sensors will be measured at.
- 5. System architecture and how data flows throughout the system.

### 1.2 Scope

This document includes:

- 1. How the system will react to failures such as disconnected sensors and over-pressurization events.
- 2. The states the rocket can be in including dry systems, leak check, launch, or even a failure state.
- 3. The ranges and accuracy of sensors in the system.
- 4. The rate at which sensors will be measured at.
- 5. System architecture and how data flows throughout the system.

Old version:

This document should be viewed from the perspective of a non-avionics member who wants to know what the onboard avionics system will do. This means outlining that steps between turning the system on to launch and recovery of the rocket. Failure modes and how to deal with errors are outlined in this document. The ARD also contains information regarding hardware that will be onboard the rocket, it's specifications, and links to the relevant datasheets. Where appropriate more detailed technical information is included as reference material to the engineers designing the system.

#### 1.3 Definitions and Acronyms

# 2 Hardware

# 2.1 Pressure Transducers

Model Number	MLH05KPSB01G
Serial Number	F8CEA38AA5
Usage	Helium Pressure PT
Usage	Ethanol Pressure PT
Usage	Chamber Pressure PT
Datasheet Link	Link
Sensing Units	PSIG
Pressure Port Type	1/4-18 NPT (ANSI B1.20.1)
Accuracy	$\pm 0.25\%$
Pressure Range	0PSIG to 5000PSIG
Sample Rate	50Hz
Output Voltage Range	1.0 to 5.0 Volts
Input Voltage Range	8.0 to 30.0 Volts
Temperature Range	-40° to +125° Celcius

Model Number	ASUHGP1K55A1AA1A20000
Serial Number	E5C0ADEA35
Usage	LOX Pressure PT
Datasheet Link	Link
Sensing Units	PSIG
Pressure Port Type	3/8 Inch 24 UNF Dash 3 (SAE J514)
Accuracy	$\pm 0.25\%$
Pressure Range	0PSIG to 1000PSIG
Sample Rate	50Hz
Output Voltage Range	0.5 to 4.5 Volts
Input Voltage Range	8.0 to 16.0 Volts
Temperature Range	-40° to +150° Celcius

# 2.2 Thermocouples

Model Number	240-080
Serial Number	BB510C3CE3
Usage	Ethanol Tank Temperature Data
Usage	Nozzle Temperature Data
Datasheet Link	Link
Type	K
Sensing Units	Celcius
Sample Rate	10Hz
Temperature Range	-73°to +150°Celcius

Model Number	240-080
Serial Number	BB51033CE3
Usage	Unused
Datasheet Link	Link
Type	K
Sensing Units	Celcius
Sample Rate	10Hz
Temperature Range	-73°to +150°Celcius

# 2.3 RTDs

Model Number	1PT100K2515
Serial Number	8105874731
Usage	LOX Tank Temperature
Datasheet Link	Link
Type	PT100
Sensing Units	Celcius
Sample Rate	10Hz
Temperature Range	-200° to +150° Celcius

# 2.4 Hall Effect Sensors

Model Number	TCS40DPR
Serial Number	6D65BA9367
Usage	LOX Fill Valve Hall Effect
Usage	Ethanol Fill Valve Hall Effect
Datasheet Link	Link
Sensing Units	mT
Output Type	Push-Pull
Trip	$\pm 4.4 \mathrm{mT}$
Release	$\pm 0.9 \mathrm{mT}$
Input Voltage Range	8.0 to 16.0 Volts
Sample Rate	$10 \mathrm{Hz}$
Temperature Range	-40° to +150° Celcius

### 3 States

### 3.1 STATE LEAK CHECK

#### 3.1.1 Helium Pressure PT Data

#### Return values

STATE_LEAK_CHECK	Continue in the leak check state.
$STATE\_IDLE$	Finished leak check so return to the idle state.
STATE_GROUND_SAFE	Return to the ground safe state because the helium tank pressure is overpressurized.

When Helium Pressure PT Data is received the CANID will be printed to stdout and the data will be printed as a string to stdout. The current time and data with milliseconds is then printed to stdout. The received can\_frame is added to the eventTimer so that the received frame will be received again in 1 second. The system then continues on in the leak check state.

### 5 CAN IDs

### 5.1 CAN Bus Load Calculations

The current CAN Bus config requires between 32456 bits and 38945 bits to be sent on the CAN bus every second.

Frequency	Best Case	Worst Case
100KHz	32.0%	39.0%
250KHz	13.0%	16.0%
500KHz	6.0%	8.0%
1MHz	3.0%	4.0%

### 5.2 ID 0 - Primary Clock Sync

Frequency: 50Hz

	·				
Byte	Bit	Signed	Range	Units	Description
0-3		False	0 to 4294967295	Milliseconds	Time since system start

# 5.3 ID 1 - OBC Clock Sync

Frequency: 50Hz

Byte	Bit	Signed	Range	Units	Description
0-3		False	0 to 4294967295	Milliseconds	Time since system start

### 5.4 ID 10 - Emergency Signal

Frequency: 50Hz

Byte	Bit	Signed	Range	Units	Description
0		False			Status
	0-1				System Status

### 5.5 ID 50 - Transition Cone Status

Frequency: 10Hz

Byte	Bit	Signed	Range	Units	Description
0		False			Status
	0				Armed

### 5.6 ID 60 - Arm Recovery

Frequency: 0Hz

Byte	Bit	Signed	Range	Units	Description
0		False			Status
	0				Arm Recovery

# 5.7 ID 61 - Detatch Second Stage

Byte	Bit	Signed	Range	Units	Description
0		False			Status
	0				Detatch Second Stage

### 5.8 ID 100 - Helium Pressure PT Data

Frequency: 50Hz

1	-,	=			
Byte	Bit	Signed	Range	Units	Description
0-3		False		Milliseconds	Time since system start
4-5		False		PSIG	Helium Pressure
6-7		False		ADC counts	Raw Helium Pressure Measure-
					ment

### 5.9 ID 101 - LOX Pressure PT Data

Frequency: 50Hz

	-)				
Byte	Bit	Signed	Range	Units	Description
0-3		False		Milliseconds	Time since system start
4-5		False		PSIG	LOX Pressure
6-7		False		ADC counts	Raw LOX Pressure Measure-
					ment

# 5.10 ID 102 - Ethanol Pressure PT Data

Frequency: 50Hz

	· ·				
Byte	Bit	Signed	Range	Units	Description
0-3		False		Milliseconds	Time since system start
4-5		False		PSIG	Ethanol Pressure
6-7		False		ADC counts	Raw Ethanol Pressure Measure-
					ment

### 5.11 ID 103 - Chamber Pressure PT Data

Frequency: 50Hz

Byte	Bit	Signed	Range	Units	Description
0-3		False		Milliseconds	Time since system start
4-5		False		PSIG	Chamber Pressure
6-7		False		ADC counts	Raw Chamber Pressure Mea-
					surement

### 5.12 ID 200 - Helium Fill Valve Hall Effect State

Frequency: 10Hz

requestly. Total						
Byte	Bit	Signed	Range	Units	Description	
0-3		False		Milliseconds	Time since system start	
4		False		Open/Closed	Helium Fill Valve Hall Effect	
					State	

# 5.13 ID 201 - LOX Fill Valve Hall Effect State

Byte	Bit	Signed	Range	Units	Description
0-3		False		Milliseconds	Time since system start
4		False		Open/Closed	LOX Fill Valve Hall Effect State

### 5.14 ID 202 - Ethanol Fill Valve Hall Effect State

Frequency: 10Hz

Byte	Bit	Signed	Range	Units	Description
0-3		False		Milliseconds	Time since system start
4		False		Open/Closed	Ethanol Fill Valve Hall Effect
					State

# 5.15 ID 250 - LOX Tank Liquid Level Data

Frequency: 10Hz

Byte	Bit	Signed	Range	Units	Description
0-3		False		Milliseconds	Time since system start
4		False		Percent	LOX Tank Liquid Level
5-6		False		Femtofarads	Raw LOX Tank Liquid Level
					Measurement

# 5.16 ID 251 - Ethanol Tank Liquid Level Data

Frequency: 10Hz

Byte	Bit	Signed	Range	Units	Description
0-3		False		Milliseconds	Time since system start
4		False		Percent	Ethanol Tank Liquid Level
5-6		False		Femtofarads	Raw Ethanol Tank Liquid Level
					Measurement

### 5.17 ID 300 - LOX Tank Temperature Data

Frequency: 10Hz

Byte	Bit	Signed	Range	Units	Description
0-3		False		Milliseconds	Time since system start
4-5		True		Celcius	LOX Tank Temperature
6-7		False		ADC counts	Raw LOX Tank Temperature
					Measurement

### 5.18 ID 301 - Ethanol Tank Temperature Data

Frequency: 10Hz

requen	rrequency. 10112							
Byte	Bit	Signed	Range	Units	Description			
0-3		False		Milliseconds	Time since system start			
4-5		True		Celcius	Ethanol Tank Temperature			
6-7		False		ADC counts	Raw Ethanol Tank Temperature			
					Measurement			

# 5.19 ID 302 - Nozzle Temperature Data

Byte	Bit	Signed	Range	Units	Description
0-3		False		Milliseconds	Time since system start
4-5		True		Celcius	Nozzle Temperature
6-7		False		ADC counts	Raw Nozzle Temperature Mea-
					surement

### 5.20 ID 303 - Upper Air Frame Temperature Data

Frequency: 10Hz

Byte	Bit	Signed	Range	Units	Description
0-3		False		Milliseconds	Time since system start
4-5		True		Celcius	Upper Air Frame Temperature
6-7		False		ADC counts	Raw Upper Air Frame Temper-
					ature Measurement

# 5.21 ID 304 - ITC Temperature Data

Frequency: 10Hz

1		_			
Byte	Bit	Signed	Range	Units	Description
0-3		False		Milliseconds	Time since system start
4-5		True		Celcius	ITC Temperature
6-7		False		ADC counts	Raw ITC Temperature Measure-
					ment

# 5.22 ID 305 - Lower Air Frame Temperature Data

Frequency: 10Hz

	- J				
Byte	Bit	Signed	Range	Units	Description
0-3		False		Milliseconds	Time since system start
4-5		True		Celcius	Lower Air Frame Temperature
6-7		False		ADC counts	Raw Lower Air Frame Tempera-
					ture Measurement

### 5.23 ID 400 - Helium Pressure PT Current

Frequency: 10Hz

Byte	Bit	Signed	Range	Units	Description
0-3		False		Milliseconds	Time since system start
4-5		True		milliamps	Helium Pressure PT Current
6-7		False		ADC counts	Raw Helium Pressure PT Cur-
					rent Measurement

### 5.24 ID 401 - LOX Pressure PT Current

Frequency: 10Hz

rrequen	requestey. Foriz								
Byte	Bit	Signed	Range	Units	Description				
0-3		False		Milliseconds	Time since system start				
4-5		True		milliamps	LOX Pressure PT Current				
6-7		False		ADC counts	Raw LOX Pressure PT Current				
					Measurement				

### 5.25 ID 402 - Ethanol Pressure PT Current

Byte	Bit	Signed	Range	Units	Description
0-3		False		Milliseconds	Time since system start
4-5		True		milliamps	Ethanol Pressure PT Current
6-7		False		ADC counts	Raw Ethanol Pressure PT Cur-
					rent Measurement

### 5.26 ID 403 - Chamber Pressure PT Current

Frequency: 10Hz

Byte	Bit	Signed	Range	Units	Description
0-3		False		Milliseconds	Time since system start
4-5		True		milliamps	Chamber Pressure PT Current
6-7		False		ADC counts	Raw Chamber Pressure PT Cur-
					rent Measurement

### 5.27 ID 404 - Helium Fill Valve Hall Effect Current

Frequency: 10Hz

rrequen	roquoney. Toriz							
Byte	Bit	Signed	Range	Units	Description			
0-3		False		Milliseconds	Time since system start			
4-5		True		milliamps	Helium Fill Valve Hall Effect			
					Current			
6-7		False		ADC counts	Raw Helium Fill Valve Hall Ef-			
					fect Current Measurement			

### 5.28 ID 405 - LOX Fill Valve Hall Effect Current

Frequency: 10Hz

Byte	Bit	Signed	Range	Units	Description
0-3		False		Milliseconds	Time since system start
4-5		True		milliamps	LOX Fill Valve Hall Effect Cur-
					rent
6-7		False		ADC counts	Raw LOX Fill Valve Hall Effect
					Current Measurement

### 5.29 ID 406 - Ethanol Fill Valve Hall Effect Current

Frequency: 10Hz

rrequen	requency. Total							
Byte	Bit	Signed	Range	Units	Description			
0-3		False		Milliseconds	Time since system start			
4-5		True		milliamps	Ethanol Fill Valve Hall Effect			
					Current			
6-7		False		ADC counts	Raw Ethanol Fill Valve Hall Ef-			
					fect Current Measurement			

### 5.30 ID 407 - Upper Air Frame VIN Current

Byte	Bit	Signed	Range	Units	Description
0-3		False		Milliseconds	Time since system start
4-5		True		Milliamps	Upper Air Frame Board Current
6-7		False		ADC counts	Raw Upper Air Frame Board
					Current Measurement

### 5.31 ID 408 - ITC VIN Current

Frequency: 10Hz

Byte	Bit	Signed	Range	Units	Description
0-3		False		Milliseconds	Time since system start
4-5		True		Milliamps	ITC Board Current
6-7		False		ADC counts	Raw ITC Board Current Mea-
					surement

# 5.32 ID 409 - Lower Air Frame VIN Current

Frequency: 10Hz

	0, 1011	•			
Byte	Bit	Signed	Range	Units	Description
0-3		False		Milliseconds	Time since system start
4-5		True		Milliamps	Lower Air Frame Board Current
6-7		False		ADC counts	Raw Lower Air Frame Board
					Current Measurement

### 5.33 ID 500 - Upper Air Frame VIN Voltage

Frequency: 10Hz

rrequest	rioquoney. Toriz						
Byte	Bit	Signed	Range	Units	Description		
0-3		False		Milliseconds	Time since system start		
4-5		True		Millivolts	Upper Air Frame Board VIN		
					Voltage		
6-7		False		ADC counts	Raw Upper Air Frame Board		
					VIN Voltage Measurement		

# 5.34 $\,$ ID 501 - ITC VIN Voltage

Frequency: 10Hz

Byte	Bit	Signed	Range	Units	Description
0-3		False		Milliseconds	Time since system start
4-5		True		Millivolts	ITC Board VIN Voltage
6-7		False		ADC counts	Raw ITC Board VIN Voltage
					Measurement

### 5.35 ID 502 - Lower Air Frame VIN Voltage

110440107. 10112									
Byte	Bit	Signed	Range	Units	Description				
0-3		False		Milliseconds	Time since system start				
4-5		True		Millivolts	Lower Air Frame Board VIN				
					Voltage				
6-7		False		ADC counts	Raw Lower Air Frame Board				
					VIN Voltage Measurement
